ABOUT ME

Software Engineer with professional experience in full-stack web development using the MERN stack. Strong foundation in JavaScript, React.js, backend integration, RESTful API development, machine learning and deep learning. Experienced in delivering scalable, responsive, and performance-optimised applications. Research-orientated mindset with published conference work in NLP and ongoing journal research in deep learning–based video forensics.

EDUCATION AND TRAINING

Software Engineering

City University of Science and Information Technology [01/10/2021 – 17/09/2025]

City: Peshawar | **Country:** Pakistan | **Level in EQF:** EQF level 6

WORK EXPERIENCE

SAT Impact Solution – Pakistan

Web developer

[24/11/2025 – Current]

- Developed scalable web applications using **MongoDB, Express.js, React.js, and Node.js (MERN stack)**, ensuring efficient data management and robust backend architecture.
- Designed and integrated **secure RESTful APIs** to enable seamless communication between frontend interfaces, backend services and deployed **machine learning models**.
- Implemented **machine learning model integration within web platforms**, enabling intelligent features such as automated predictions, data analysis and real-time inference.
- Optimised application performance and ensured **responsive and user-friendly interfaces** across multiple devices and platforms.
- **Led and coordinated a development team**, demonstrating strong leadership and collaboration skills while managing tasks, guiding team members and ensuring timely project delivery.
- Collaborated in structured development workflows using **Git-based version control** for efficient code management, version tracking, and team collaboration.

National Center For Cyber security UETP – Pakistan

artificial intelligence engineer

[04/08/2025 – 17/11/2025]

- Developed and implemented machine learning **and deep learning models** for research-orientated projects addressing cybersecurity and intelligent data analysis challenges.
- Collaborated with research teams to **design, train, and evaluate AI models**, improving model accuracy and performance through experimentation and optimisation.
- Contributed to the **development and publication of a conference research paper**, including literature review, experimental design, and technical documentation.
- Led and coordinated project tasks within the team, demonstrating **strong leadership, collaboration, and problem-solving skills**.
- modern AI techniques and continuously explored **emerging advancements in artificial intelligence and deep learning** to enhance project outcomes.

SKILLS

Html / CSS / JavaScript / RESTFull API / Javascript (React.js) / PHP, MySQL / Woo Commerce / Data VisualizationTableau(Data Analysis)Data Management / Machine Learning • / deep learning / JavaScript (Node.js) / Data preprocessing and exploratory data analysis (EDA)

LANGUAGE SKILLS

Mother tongue(s): Urdu

Other language(s):

English

LISTENING C1 **READING** C1 **WRITING** C1

SPOKEN PRODUCTION B2

SPOKEN INTERACTION B2

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

PUBLICATIONS

[2025]

Early Identification of Depression from Twitter Data Using Natural Language Processing, Sentiment Analysis, and Machine Learning Techniques Conducted a comparative study on detecting mental health-related distress in Twitter posts using machine learning and deep learning models. Developed an end-to-end NLP pipeline involving text normalisation, tokenisation, feature extraction via TF-IDF, and dense word embeddings. Trained and evaluated SVM, GBM, LSTM, and GRU classification models on a labelled dataset. The research demonstrated that a robustly engineered SVM achieved the highest classification accuracy of 82.8%, successfully proving that classical algorithms can competitively outperform deep neural architectures in short-text psychological analysis and social media monitoring.

Authors: Malik Ahsan Kamran, Faran Saeed, Ehaab Ullah et al. | **Journal Name**: 20th International Conference on Emerging Technologies (ICET-25)

[2026]

Toward Efficient Fake Frames Detection in Video Using Deep Learning Developed a deep learning-based deepfake detection system utilising the ResNet50 convolutional neural network architecture to combat visual misinformation. Trained on the Celebrity Deepfake dataset, the model processes videos by extracting and analysing individual frames to identify artificially manipulated facial features. The system

achieved robust performance metrics, including 82.33% accuracy, 89.15% recall, and an 82.46% F1 score. To ensure practical real-world usability, engineered a user-friendly web application that allows users to seamlessly upload videos for rapid and accessible digital content verification.

Authors: Iftikhar Alam *, Malik Ahsan Kamran, Ehaab Ullah | **Journal Name**: The International Journal of Frontier Sciences (TIJFS) | **Publisher**: DR.Iftikhar Alam

CERTIFICATIONS

[Xpert IT Solution & Training Peshawar, 16/12/2024]

National Vocational and Technical Training Commission (NAVTTC) Completed the NAVTTC Advanced Web Application Development programme, gaining hands-on, full-stack experience with HTML, CSS, JavaScript, React.js, PHP, MySQL, and WordPress. Through real-world projects, built scalable, responsive web and e-commerce applications while mastering UI/UX design, database integration, and performance optimisation.

Mode of learning: Work based

[Cisco Networking Academy, 12/03/2026]

Introdution to AI Completed the Introduction to AI course from Cisco Networking Academy, establishing a solid foundation in machine learning, natural language processing, computer vision, and AI ethics. Gained practical insights into data-driven decision-making, algorithms, and automation, strengthening my analytical skills to understand how AI technologies drive digital innovation and solve complex industry problems.

Mode of learning: Online
